BRITISH COLUMBIA
GEOLOGICAL SURVEY BRANCH

INTRODUCTION

British Columbia's geoscience database is available to the public largely through a variety of reports, maps and computer data generated by the Geological Survey Branch. The Ministry of Energy, Mines and Petroleum Resources has issued publications since 1874, but the character of these publications has varied over the years in response to a changing minerals industry and market demands. Report and map series have been initiated and amalgamated as required for efficient information distribution. This catalog lists material published by the Ministry over the years and contains a current price if the publication is still available. Out of print materials (indicated by "*o.p.*") are available through various library systems. Reports in the publication process, which are being prepared by an author or at the printing stage, are identified by "*i.p.*" (in preparation).

This publication is also a guide for obtaining geoscience information not available through conventional publication media. This includes various computer databases (such as MINFILE and the Regional Geochemical Survey data) and direct access to the Branch's geoscientists.

At the time of printing most publications are available through Crown Publications or its agents. However, **PRICES AND AVAILABILITY MAY CHANGE** so please check with the vendor prior to submitting orders. Crown Publication stock numbers are indicated in brackets for each publication. These should be used for ordering publications. Further details may precede each section.

The Province of British Columbia has dealt with mineral resource related issues through a variety of organization structures over the years. Current usage is to identify publications as issued by the Ministry of Energy, Mines and Petroleum Resources but the names of predecessor organizations are as follows:

1874 - 1961 Department of Mines
1962 - 1977 Department of Mines and Petroleum Resources
1978 - 1990 Ministry of Energy, Mines and Petroleum Resources

The 1988 Annual Report covers the time period January 1, 1987 to March 31, 1988. It represents the transition of the Ministry's Annual Report from the earlier calendar year reporting period to a fiscal year reporting period. This change puts the report of the Ministry's activity, its annual budget, and its Business Plan on a common 12-month basis. Annual Reports commencing in 1989, will cover this 12-month period, while the 1988 report covers a 15-month time span.

The *Lode Metals* sections of the Annual Report, equivalent in many ways to *Geology, Exploration and Mining in British Columbia*, for the years 1956 to 1968 are available at a cost of $3.00 each.

From 1969 to 1974, technical reports on geology, mineral exploration, metal mines, placer, industrial minerals, structural materials and coal, formerly included in the Annual Report, were published separately in *Geology, Exploration and Mining in British Columbia*. In 1975, *Geology, Exploration and Mining in British Columbia* was divided into three parts (*see* page 9).

The Annual Reports for the years 1969 to 1970 inclusive, comprise chapters on the mining and petroleum industries, activity of the Ministry, mineral resource statistics, and petroleum and natural gas statistics. In 1980 the detailed statistics were transferred to

the Information Report series. This volume was entitled the *Summary of Operations*. In 1985 the statistics were again transferred within the Information Report series to the volume entitled the *B.C. Mineral Quarterly* (*see* page 50).

NOTES

EXPLORATION IN BRITISH COLUMBIA

In 1969 a new annual publication entitled *Geology, Exploration and Mining in British Columbia* (G.E M.) was initiated. It comprised chapters on metals, placer, structural materials and industrial minerals, and coal. It incorporated and expanded on the geological and technical reports that were formerly part of the Annual Report series. When ordering please quote the stock number indicated in brackets. **Please note that this publication series comprises a report on mineral industry and government activities for the calendar year usually preceding the year of publication and identified in the volume name.**

1975	G.E.M. 1974	10.90 (2069P)	13.00 (2069H)

In 1975, *Geology, Exploration and Mining in British Columbia* went through another revision and was separated into three parts: *Geology in British Columbia, Exploration in British Columbia*, and *Mining in British Columbia*. *Geology in British Columbia* was discontinued after 1981. *Exploration in British Columbia* from 1975 through 1984 contains an overview of mineral exploration activity and a summary of assessment report data, then in 1985 *Exploration in British Columbia* incorporated what is known as Part B, containing detailed descriptions of mineral properties. This re-established the excellent geological reporting typical of the *G.E.M.* and *Geology in British Columbia* series. In the 1989 volume, Part C, A Summary of Assessment Report Data, was discontinued and a new emphasis placed on economic geology in Part B. Starting in 1990, information on assessment reports is contained in the *Assessment Report Index* (*see* page 47).

BULLETINS

The current Bulletin series was started in 1940 and comprises the premier geological publications of the Geological Survey Branch. From the years 1896 to 1939 Bulletins were issued as an annual series, but starting in 1940 Bulletins have been numbered sequentially. Many Bulletins are accompanied by geological maps and, where applicable, the catalog identifies the scale of the main map. Out of print Bulletins may be viewed in the Ministry library, 430 - 617 Government Street, Victoria. Bulletins are available through Crown Publications Inc. and its agents. When ordering Bulletins please quote the stock number indicated in brackets.

GEOLOGICAL FIELDWORK

The annual Geological Fieldwork volume is the primary publication for reporting results of the previous season's mapping and research activities. It also contains geoscience articles produced by Branch staff and external authors on topics relevant to British Columbia. This is the premier annual publication for the Geological Survey Branch and, as a part of the paper series, it is always assigned the first paper number for each calendar year. Geological Fieldwork is available through Crown Publications Inc. and its agents. When ordering Geological Fieldwork please quote the stock number indicated in brackets.

PAPERS

Toward the end of 1978, the Ministry started a series called Papers to help distinguish the increasing number of miscellaneous publications. This series, in the past, encompassed all ministerial publications that were not included in the Bulletin, GEM, (Geology, Exploration and Mining), or Annual Report series. Since 1987, it consists primarily of geological research reports, representing the culmination of major project activity or, annual reviews of the Geological Survey as a whole. Some earlier publications from the Inspection and Engineering Branch have been allotted numbers and are listed below for completeness. Papers are available through Crown Publications Inc. and its agents. When ordering Papers please quote the stock number indicated in brackets. **Note: The first publication each year in the Paper series is *Geological Fieldwork* and these are listed separately on page 19.**

OPEN FILES

The Open File series of maps and reports was initiated in 1986 to speed delivery of geoscience data to the public. Publications in this series are prepared by the authors and receive limited editorial scrutiny prior to rapid printing and distribution. In many cases these publications report preliminary results from ongoing projects and are replaced by final maps and reports. Open Files are available through Crown Publications Inc. and its agents. For ordering Open Files the stock numbers consist of the year and issue number preceded by OF; for example, the stock number for Open File 1986-1 is OF86-1.

INFORMATION CIRCULARS

Information Circulars are a special series of publications which provide government, industry and the general public with a wide variety of information relating to the geoscience database. Print runs are limited but many of these circulars are updated annually. Information Circulars distributed by the Geological Survey Branch are free of charge as long as supplies last.

ASSESSMENT REPORT DATA

ASSESSMENT REPORT INDEX

This is a new bibliographic index of Assessment reports submitted from 1946 to the present. It contains approximately 21 000 reports sorted by NTS mapsheet and Assessment Report number. For each report the index provides latitude/ longitude, UTM coordinates, claim names, operator/author, type of exploration work reported, report year and off-confidentiality date. COMfiche and diskettes contain the same data as available in paper copy.

PAPER $75.00
(includes page sized, photo-reduced index maps)

COMfiche $25.00
(includes index maps on 35 mm fiche)

DISKETTES $50.00
(contain about 10 Mb of data) ASCII format, available on 360K or 1.2 Mb format. The information is arranged in "tables" with each of the above categories and linked by a common assessment report number.

B.C. MINERAL QUARTERLY

The B.C. Mineral Quarterly was published from 1982 through 1986. The publication contains statistics on production of B.C.'s major mineral commodities (including quantities produced and values and prices received), as well as selected significant events, studies, government initiatives and programs and items of general interest on B.C. mining. These types of statistics and information are now published in the Mineral Market Update.

For further information regarding the B.C. Mineral Quarterly, please contact:

Victoria, B.C. V8V 1X4
(604) 356-2227

MINERAL MARKET UPDATE

The Mineral Market Update is produced quarterly by the Mineral Policy Branch and is distributed free of charge. The publication contains articles on topics of current interest, recent mineral statistics (including production, employment, value and prices), local and global developments in mineral commodity markets, information on major capital expenditure projects, highlights of exploration projects, projects active in the Mine Development Review Process, measures of activity in Branches of the Division and recent publications.

The Mineral Market Update is available from:

INFORMATION REPORT SERIES

The Information Report series was initiated by the Ministry in 1980. The Summary of Operations, Mineral Resources Division (1980 to 1984 inclusive) contains detailed statistical information formerly incorporated in the Annual Reports of the Minister. This volume consists of three chapters: Activity of the Mining industry in the title year, activity of the Mineral Resources Division in the title year, and detailed mineral resource statistics for the title year. Information Reports are available through Crown Publications Inc. and its agents. When ordering Information Reports please quote the stock number indicated in brackets.

The following issues of the Summary of Operations are available through Mineral Policy Branch:

B.C. MINERAL STATISTICS - ANNUAL SUMMARY TABLES

This publication continues the annual final statistics of mineral production in B.C., including such information as prices, total values and production of all mineral commodities produced in B.C. From the late 1800s to 1979, these statistics were contained in the *Annual Reports of the Minister of Mines*. From 1980 through 1984, they formed part of the *Mineral Resources Division - Summary of Operations*.

PROPERTY FILE

Property File is a library of research material on the approximate 10 000 mineral occurrences contained in the MINFILE database. Property File and database has a corresponding Property File under the same number which contains news clippings, bulletins, ministry reports, theses, papers, field notes, company prospectuses and pamphlets, historical information, geology, geochemistry, geophysics, drilling data, claim maps, sketches of workings, photographs old mineral inventory summaries and bibliographies. Some of these are unique documents, existing only in Property File, and can therefore be extremely useful to researchers.

Property File may be viewed at:

MINFILE

MINFILE is a comprehensive, computerized mineral inventory database of over 10 000 metallic, industrial mineral and coal occurrences within the Province of British Columbia. Each occurrence is represented by a unique record in the database which contains 43 data elements describing mineral deposits in terms of location, tectonic belt, commodity, mineralogy, host rock name and age, deposit type, lithology, production, and reserves. A Capsule Geology contains an expanded geological description and all information sources used to research each occurrence are included in a bibliography.

MINFILE/pc, free to all purchasers of data, is a menu driven search-and-report program for IBM-PC compatible computers. This program searches the database in response to specific queries, thus building up an information base for prospecting, ground acquisition and further investigations.

The MINFILE data identified by the search program can be plotted using computer aided drafting systems, GIS or similar plotting software. The report module can produce hard copy reports of several varieties.

MINFILE data may be purchased as hard copy reports, plotted on maps, or as digital data on diskettes.

By the end of 1991 about seventy per cent of the known mineral occurrences in the Province had been investigated and geologists are currently working on the remaining. This updated information will be released periodically. Forty-eight NTS map areas were released as of December, 1990 (*see* location map).

REGIONAL
GEOCHEMICAL SURVEYS

REGIONAL GEOCHEMICAL SURVEY DATA (RGS)

The RGS database consists of high quality multi-element analytical data, (*e.g.* Au, Ag, Cu, Pb, Zn), field observations, lithological data and site locations for stream sediment and water samples collected from approximately 33 000 sites across British Columbia. Thirty-three 1:250 000 map sheets have been sampled at an average density of 1 site every 13 square kilometres. A great many new mineral prospects have been discovered, old ones have been re-evaluated, and a number of areas previously thought to have little mineral potential have been investigated as a result of the regional geochemical surveys. Information extracted from the RGS database has been useful not only for exploration work, but also for use in regional metallogenic studies, geological interpretations and projections, and as a database for land use decisions and environmental studies. At this time, new map sheets are released to the public on an annual basis. The RGS data is available in two formats:

OPEN FILE REPORTS

A typical data package consists of:

1:250 000 and more recently 1:500 000-scale maps presenting site locations and elemental concentrations.

Data booklet containing detailed listing of field observations and analytical results, statistical summaries plus brief discussions on methodology and results.

This format allows immediate appraisal of the data and is favoured by the average user.

FLOPPY DISKETTES

Site locations, field observations and analytical data, together with discussions on technical and logistical parameters of the survey, are recorded as ASCII files on MS-DOS 360K, 5 ¼ inch floppy diskettes.

This format allows considerable flexibility in examining data and is favoured by clients using computers equipped with statistical and plotting software.

NOTES

COALFILE

The Geological Survey Branch maintains a large library of coal assessment reports in Victoria, dating from 1900. These have been submitted by exploration companies in compliance with the Coal Act. This library is available for public viewing and copying. Partial libraries are located in the district geology offices.

Exploration data from the assessment reports have been summarized and stored in a computer information system called COALFILE, which provides a quick and efficient method for handling the large volume of data.

Information in COALFILE is organized in six record types or files. These files consist of: 1. Summary of data in reports
2. Comments concerning the reports
3. Record of maps in the reports
4. Trench information
5. Adit or Pit information
6. Borehole information

All six record types are sequential files with 230 characters per line. COALFILE is maintained on both mainframe and micro computers. Diskettes are MS-DOS compatible. The tape format is EBCDIC or ASCII, FB, LRECL = 230, BLKSIZE = 2300.

All output in raw data format is accompanied by a description of the record structures and code tables.

COSTS - There is a minimum charge of $25.00 per request.

RAW DATA

- HARDCOPY - Listings greater than 2 500 records will cost an additional 1 cent per record.
- DISKETTES - Straight file copying will cost $25.00 per diskette
- CUSTOMIZED RETRIEVALS - The minimum charge is $25.00 plus $25.00 per hour for selective retrievals.

ADDITIONAL OUTPUT

- ASSESSMENT REPORT LISTING - A summary index of all the reports on file at the Ministry in Victoria. (Cost $5.00)
- DETAILED CODING FORMS Indicate the data items in each file. (Cost $2.00)
- PHOTOCOPYING of reports is done by a private victoria firm at current copying rates.

NOTE: There is a three-year confidential period for coal exploration assessment reports; only non-confidential information is publically available.
